

Private Jet Rentals in Miami, Miami Air Charters

The latest and perhaps the most significant development in terms of aircraft technology, Air Charter business and private jet industry is Light Jets as a new aircraft category. A light jet, previously known as a micro jet, is, by convention, a small jet aircraft for single pilot operation, seating 4-8 people, with a maximum take-off weight of fewer than 10,000 pounds. They are lighter than what is commonly termed business jets and are frequently used as air taxis. Best Miami Concierges feature light jets with pressurized cabins that can fly at higher altitudes than other planes, safety performance and a semi-private lavatory. In a Miami private jet rental you will have smooth ride with the luxury of a quiet engine. Light Jets is the most economical choice for short to mid-range trips, with an average cruising speed of 400-560 mph and average nonstop range of 1,500 miles. These aircrafts provide a much more affordable and cost effective corporate jet that not only provides unique aircraft rentals opportunities but it also opens the door to a new business model in the air transportation market; the Air Taxi.
